

1. Create a table with 3 rows and 3 columns. The top row contains 1 cell that spans 3 columns. The leftmost cell on the next row spans 2 rows. All other cells span a single row and column.

Each cell has a number. The numbers can be put in an `<h1>` tag if desired. The image below shows what the table should look like using `<h1>` tags around the numbers.

<h1>1</h1>		
<h1>2</h1>	<h1>3</h1>	<h1>4</h1>
	<h1>5</h1>	<h1>6</h1>

1. Recreate the list shown in the image below: The outer list is an order list, and the nested lists are unordered.

## 1. Desktop

- Linux
- Mac OS
- Windows

## 2. Mobile

- Android
- iOS
